D 06 F

Pressure reducing valve with balanced seat Standard pattern with set point scale

Product specification sheet

Construction

The pressure reducing valve comprises:

- Housing with G 1/4" pressure gauge connections on both sides
- Threaded connections (options A & B)
- Valve insert complete with diaphragm and valve seat
- Fine filter with 0.16 mm mesh
- Spring bonnet with adjustment knob and setting scale
- Filter bowl
- Adjustment spring
- Pressure gauge not included (see accessories)

Materials

- Brass housing
- Brass threaded connections
- High-quality synthetic material valve insert
- Stainless steel fine filter mesh
- High-quality synthetic material spring bonnet and adjustment knob
- Clear synthetic or brass filter bowl
- Fibre-reinforced NBR diaphragm
- NBR seals
- Spring steel adjustment spring
 Subject to change
 ENOH-1002GE23 R0900

Application

D 06 F pressure reducing valves protect household water installations against excessive pressure from the supply. They can also be used for industrial or commercial applications within the range of their specification. By installing a pressure reducing valve, pressurisation damage is avoided and water consumption is reduced. The set pressure is also maintained constant, even when there is wide inlet pressure fluctuation.

Reduction of the operating pressure and maintaining it at a constant level minimizes flow noise in the installation.

Special Features

- DVGW approved
- Up to size 11/4"approved for low noise, Group 1 without limitations
- The outlet pressure is set by turning the adjustment knoh
- The set pressure is directly indicated on the set point scale
- The adjustment spring is not in contact with the potable water
- The valve insert is of high quality synthetic material and can be fully exchanged
- Integral fine filter
- Also available without fittings
- Easily retrofittable to convert valve to a reverse-rinsing filter combination
- Can be retrofitted with an inlet non-return valve
- Inlet pressure balancing fluctuating inlet pressure does not influence outlet pressure
- <u>inService</u> Servicing and maintenance without removal from pipework
- Reliable and proven in millions of applications
- Light weight

Range of Application

Medium: Water and other non-aggressive

liquids, compressed air and nitrogen

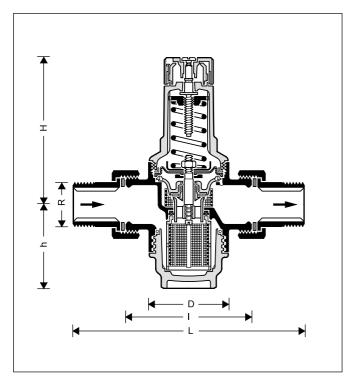

Inlet pressure: Maximum 25.0 bar
Outlet pressure: 1.5 – 6.0 bar

Technical Data

Operating temperature: Maximum 40 °C with clear filter bowl

Maximum 70 °C with brass filter bowl

Minimum pressure drop: 1 bar Connection sizes: 1/2" to 2"

Method of Operation

Spring loaded pressure reducing valves operate by means of a force equalising system. The force of a diaphragm operates against the force of an adjustment spring. If the outlet pressure and therefore diaphragm force fall because water is drawn, the then greater force of the spring causes the valve to open. The outlet pressure then increases until the forces between the diaphragm and the spring are equal again.

The inlet pressure has no influence in either opening or closing of the valve. Because of this, inlet pressure fluctuation does not influence the outlet pressure, thus providing inlet pressure balancing.

Versions

D 06 F- . . . A = With threaded male connections, clear filter bowl – up to 40 $^{\circ}$ C

D 06 F- . . . B = With threaded male connections, brass filter bowl – up to 70 $^{\circ}$ C

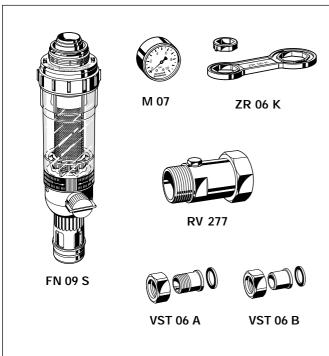

D 06 F-...E = Without fittings, with clear filter bowl — up to 40 °C

Accessories

FN 09 S HABEDO® Retrofit filter

Reverse-rinsing filter for retro-conversion to a filter combination unit of D 06 F pressure reducing valves made after 1977.

M 07 Pressure gauge

Housing diameter 63 mm, rear connection thread $G^{1}/_{4}$ ". Ranges: 0 – 4, 0 –10, 0 – 16 or 0 – 25 bar Please indicate upper value of pressure range when ordering

ZR 06 K Double ring wrench

For removal of spring bonnet and filter bowl of D 06 F valves with connection sizes R $^{1}/_{2}$ " – 2"

RV 277 Inlet non-return valve

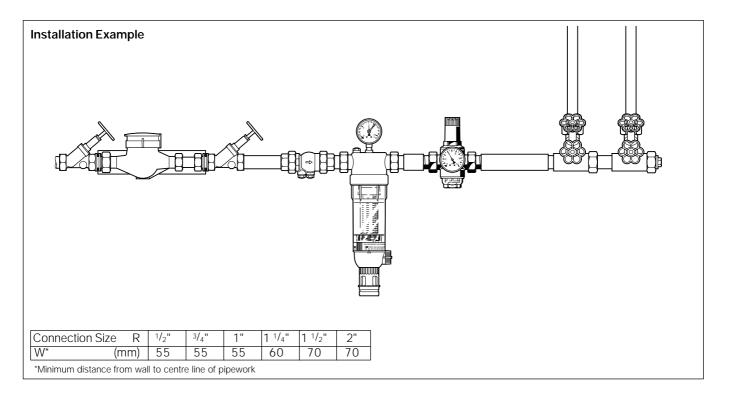

For D 06 F with connection sizes R $^{3}/_{4}$ " – 2"

VST 06 Connection set

Two threaded or solder connections

A = Threaded connections

B = Solder connections

Installation Guidelines

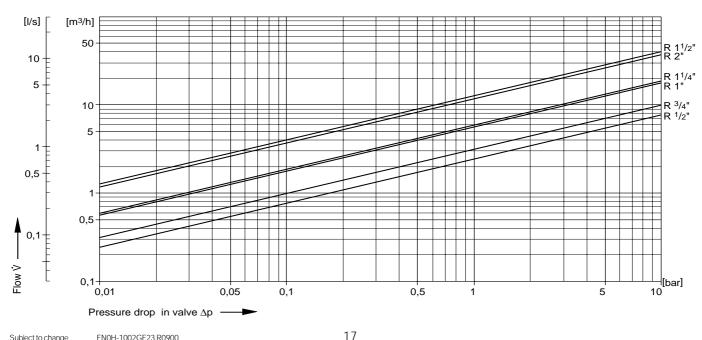

- If possible install in horizontal pipework with the filter bowl downwards
 - O This is the most effective position for cleaning
- Fit shut off valves
 - O This permits **inService** servicing and maintenance without removal from pipework
- Ensure good accessibility
 - O So that the pressure gauge can be easily seen
 - O With clear filter bowl, degree of contamination can be easily seen
 - O Simplifies maintenance and inspection
- For residential applications where maximum protection against dirt is required, install a fine filter upstream of the pressure reducing valve
- If sufficient space is available, it is recommended that a straight section of pipework of at least five times the nominal valve size is provided after the pressure reducing valve

Typical Applications

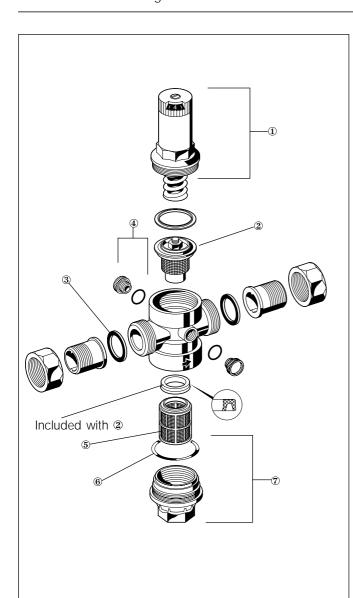

D 06 F pressure reducing valves are suitable for all types of household water installations. They can also be used for industrial and commercial applications within the range of their specifications.

Pressure reducing valves should be installed:

- If the static pressure exceeds the maximum permissible value for the system
- As protection against noise if the static pressure at take off points exceeds 5.0 bar (DIN 4109: Noise protection in high buildings)
- If several pressure zones are required when a pressurisation system is used (pressure reducers on each storey of a building)
- If pressure fluctuations in the downstream system must be avoided
- To achieve constant inlet and outlet pressures on pumped pressure boosting systems
